What makes us Unique?

- ✦ **Most reasonably priced services:** Due to our efficient working operations, we are able to keep our costs low. Hence, we are able to offer our services at most reasonable rates to our customers. Our prices are most competitive and our services beats that of many big giants in this industry. If you are getting something cheaper than this, believe us, there is a catch!
- ✦ **128 bit encrypted Web Hosting Control Panel:** Most of other web hosting companies do not provide this. Your data and account information is completely secure
- ✦ **Advanced Control Panel:** Everything you can dream of can be done from our Advanced Control Panel. Below you can view one of the screenshots of our control panel. We give you complete access to your web hosting so that you can freely experiment what you like!

- ✦ **Startups Friendly Approach:** We have a very supportive attitude towards web startups and those who are new to web hosting. We do not expect all of our

clients to be techies and hence, have a special team that helps you in setting up your website live.

- ✚ **Timely Support:** With a staff of 50 employees, we are able to provide timely support to each and every customer. Our support staff even helps you in your site programming problems to a reasonable extent.
- ✚ **ISO 9001:2000 Certified Company:** When you are dealing with Vyom, you have the assurance that you are dealing with an internationally accredited organization that has all the processes and systems in place. In fact, Vyom is India's youngest ISO 9001:2000 Certified IT Company. We got the certification in just 8 months of our inception.

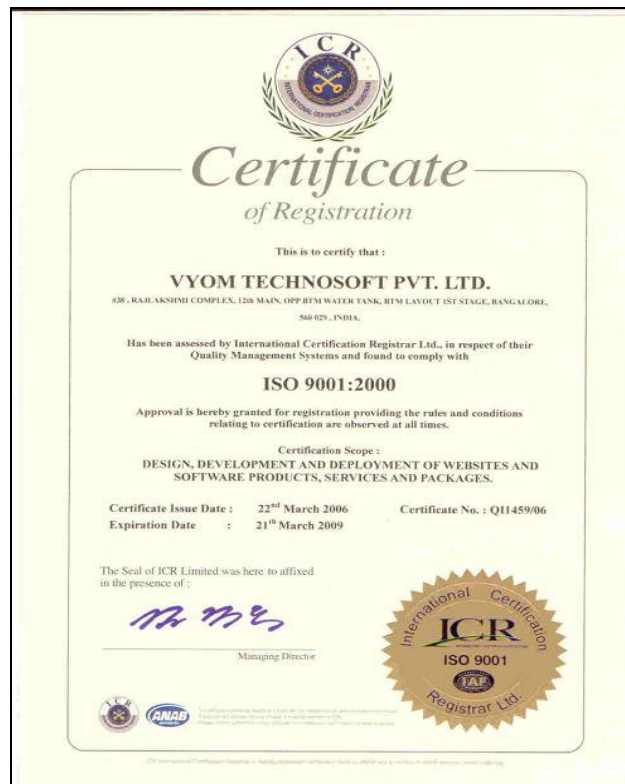

FIG: VYOM TECHNOSOFT ISO 9001:2000 CERTIFICATE.
VYOM IS INDIA'S YOUNGEST ISO CERTIFIED COMPANY

- ✚ **Monthly Backup CD-ROM Delivered at your Doorstep:** Vyom is probably the only web hosting company that provides you the facility of having your site data sent to you by courier at a nominal fees every month. Of course, before this, we will need your written permission to access your data.

Our Data Center

Cisco Powered Network: All our servers are connected to a 100% Cisco Powered Network. Using enterprise-class Cisco networking gear, all routers, layer-2 switches, and layer-3 switches are tested in labs prior to deployment to ensure stability and interoperability.

Redundant High Bandwidth Connectivity: Using multiple Tier 1 Service Providers, our server leads the discount dedicated hosting industry with our 99.9% uptime guarantee, ensuring the highest degree of security against network downtime and the fastest possible data transfers.

Bandwidth Utilization: It is a common misconception that the amounts of bandwidth (size of the pipes that carry the data) differentiate web hosting companies. In reality it is not only the size of the pipes that matters, it is the utilization levels. The utilization of our Internet connections is vital to a network's ability to transfer data without packet loss or latency. Our Server aims to keep all connection usage below 50% to avoid any connectivity problems.

Dynamic Routing: Our server runs the Border Gateway Protocol (BGP4) for best case routing. The BGP4 protocol is a standard that allows for the routing of packets of information sent out from our network. Each packet of information is evaluated and sent over the best route possible. Because of our redundant network architecture, packets may be sent via alternative routes even if they are being delivered to the same end user. Should one of our providers fail, packets leaving our network are automatically redirected through another route via a different provider.

Network Security: Our servers network is a fully switched network. Traffic destined for a website hosted on a server is sent only through switching equipment necessary to deliver the information to that server. This minimizes the risk of someone sniffing or capturing traffic being sent across the network. Furthermore, our data center vigorously prosecutes persons who generate malicious attacks on our internal network.

Carrier Class : Our facilities are carrier-neutral sites and are built completely on computer-grade raised flooring; it is built for dedicated server hosting with redundant fibre entry points.

Regulated Climate Control: The data centers' HVAC (Heating Ventilation Air Conditioning) systems are N+1 redundant. With full particle filtering and humidity control, the environment is maintained at a cool 68 degrees (F) to ensure a comfortable environment for your server.

Power Systems: Our data center is not reliant upon the local power grid to guarantee maximum uptime. Our on-site, auto-switched power generator, and centralized UPS systems provide power conditioning and ensure uninterrupted data center operation. Additionally, the generators are regularly tested to ensure that it will continue to function in the event of an emergency.

Datacenter Security: Our data centers are physically isolated from everyone but level three technicians. Public access is strictly forbidden. Access to the floor the datacenter resides on is restricted and completely locked down.

Our HR & Infrastructure at Bangalore Center

- ✚ Total 50 highly skilled employees. Each employee is specialist in his/her domain.
- ✚ High Speed Internet Connection from Bharti for Remote Server Administration
